

# ZERO•NET™

## RF2500

### REGLAZE

#### PRODUCT DESCRIPTION

The Zero•Net™ RF2500 reglaze system enables you to update a curtain wall system without modifying the existing framing. All you need to do is remove the glass, install FreMarq's specialized FortMax™ thermal barrier profile over the existing system, install new glass, and add new pressure plates and covers. Your building can now perform 50% more efficiently, potentially at half the replacement cost.

This process will allow you to update the current glazing to:

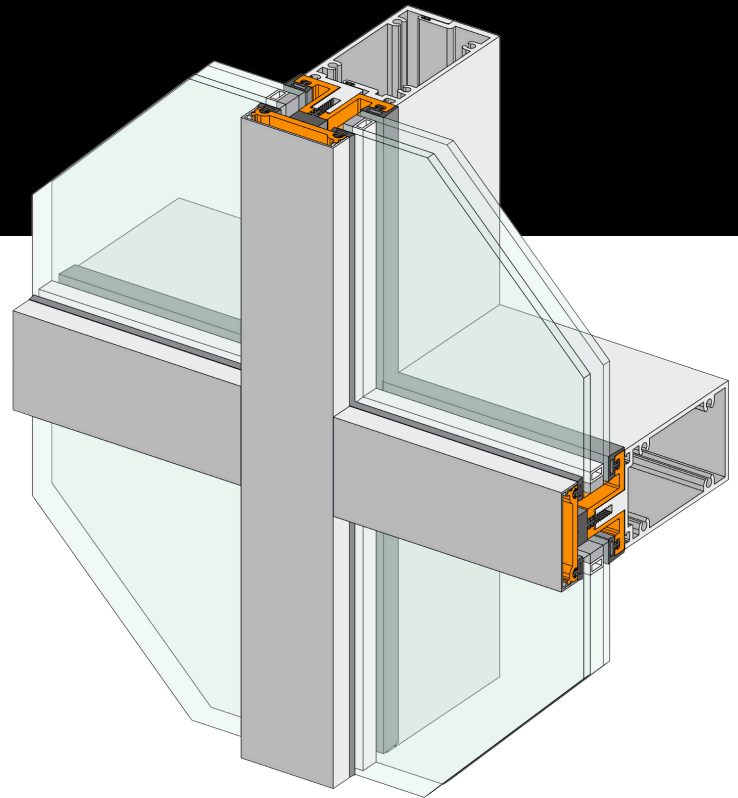

- Bird-friendly glazing
- Thermally enhanced glazing

This system is designed for Pressure Wall applications.

#### PRODUCT BENEFITS

- Lower HVAC maintenance cost
- Improve occupant comfort
- Increase usable/leasing floor space
- Eliminate condensation
- No disruption of interior building operations
- Reuse existing framing
- Can be completed unit by unit - on your timeline and budget
- Bonded FortMax™ components enable the same strength as typical aluminum

\* Existing curtain walls should be reviewed structurally for code compliance before work is performed. FreMarq Innovations can help with this process.
